# Foreword

## **Component origin**

This component has been developed for [the tourist office of Châteauneuf-sur-Loire](#) website. Its initial purpose is to show tourist sites or similar on a map, and to associate to this geolocation the elements necessary for their promotion under an article.

Then GMapFP has been share in Joomla community, and has greatly evolved to adapt to different individual needs (a new version almost every week). Which makes now, a very complete and powerful tool.

Since 2011 there is a Pro version exist and complete all present's parameters. It is delivered with one month of technical support, all the updates are free. The license of utilization is only for one field.

**Official website** <http://www.pro.gmapfp.org>

**License of the component** GMapFP is a freeware under [GNU GPL](#) license.

Under no circumstances, a commercial company can sell a GMapFP license, or all or a part of the source code. On the other hand a commercial company has completely the right to sell a service based on GMapFP (Installation, configuration, formation...) and to modify the code for customer's needs, or to sell extensions (modules, templates) specifically developed for GmapFP.

## **Basic**

GMapFP will simply use the various features of Google Maps to integrate maps into your website, how? That is the job of the developer ...

In addition the component will offer you additional features to enhance your cards polygons, shortcuts to the articles, layout etc.

The basic organization of GMapFP is simple: a map with markers which identify places that could be classified by category and group category. Above or below the map there is a possibility to display a customized and of course the description of the places, a listing, itinerary, etc. Then, simple menus will call your different customized work. A plugin will also allow the integration of one or more maps in yours articles.

## **Get a Google Maps API key**

Every version of GmapFP are compatible with Joomla 2.5 and Joomla 3 usint API Google Map V3. So no need of API Google Map key for you website.

## **Thanks to the author of the component**

Aux équipes de développeurs qui ont créées des composants Google Map pour Joomla, car ils m'ont donné le principe de base, mais pas de composant suffisamment complet et adapté à mes besoins. Donc, ils m'ont donné le besoin de développer GMapFP.

A la communauté des utilisateurs de GMapFP qui poste sur le forum, car ils sont convaincus d'avoir fait le bon choix (et ils ont raison!) mais ne trouvent pas dans GMapFP le petit truc qu'il leur manque.

Ceux sont eux qui permettent à GMapFP d'évoluer et d'en faire ce qu'il est, par leurs demandes et leurs remontées de problème (éléments auxquels j'essaye toujours de répondre de façon positive).

Et bien sûr LJ01 qui s'investi dans ce projet.

# Installation and updates

## 1. Component's installation

Before doing any installation and updates, it is recommended to a back-up of the website.

All the GMapFP's version are installed in the same way by your interface backend of your website. In the administrative part of your Joomla, click on menu "extensions" and "install/ uninstall".

Click on "Choose a file ". Choose the GmapFP.zip file you have just downloaded. Confirm your selection and click on "Upload file and Installation ". A message will indicate you that you are on the right track appears: "Success! "

## GMapFP Installation

Bienvenue sur GMapFP vJ3\_15Pro !

Avant de commencer, je vous invite, si ce n'est pas déjà fait, à découvrir toutes les possibilités de ce composant et de son ou ses plugins sur son [Site officiel](#)

Au revoir, et bonne continuation avec GMapFP

## GMapFP Installation (in English)

Welcome on vJ3\_15Pro GMapFP !

Before starting, I invite you, if this isn't already made, to discovery all the possibilities of this component and thisd plugin on its [Official Site](#).

Goodbye, and good continuation with GMapFP

The GMapFP Pro version de GMapFP can install over the free version, or directly without free version. During the update free version after installation, go to the home page GMapFP and click "Regenerate Thumbnails". The updates are sent to you personally by the site administrator <http://pro.gmapfp.org/>.

Be careful, if you uninstall this component all data base will be lost (places, category, etc).

## 2. Plugins and module installation

The Pro version has its own extensions which are different from the free version.

Use the same process to install GMapFP's plugins and module". A success' message will indicate the success of the operation. To use it, refer to Plugins and Module sections.

Status	Plugin Name	Type	Element	Access	ID
 	Content - GMapFP	content	gmapfp	Accès Public	10003
 	Search - GMapFP	search	gmapfp	Accès Public	10002
 	Xmap - GMapFP Plugin	xmap	com_gmapfp	Accès Public	10014

Think to activate them in Joomla in the pug-ins and modules part.

## 3. Updates

GMapFP is a recent component which permanently evolves. There are regular updates to be made, if you want to exploit the entirety of the developed features.

This update will be made without any loss of data. Your .css file will not be deleted, nor the additions of contacts and their data during the updates.

Concerning the plug-ins and its modules, the installation will be made directly on your previous version. We will take care after every updates to have a quick look on the principal functionality of the website to be sure that there is no issues.

The reactivation of this pug-in is doing also during the update.

## 4. Installation de langage

GmapFP is native in French and in English by default (so Joomla recognize French if your Joomla configuration settings are in French).

You can find translation files of the component in the download and forum section of the free official website.

Il existe des fichiers de traduction du composant que vous retrouverez dans les sections Téléchargement et Forum du site officiel. Additional languages are partially or totally available.

Best, a package .zip exists and is installing in the same manner as the previous ones.

At worst, you have to download via a FTP.GMapFP. Uses 3 files that must be uploaded to your website, as indicated below :

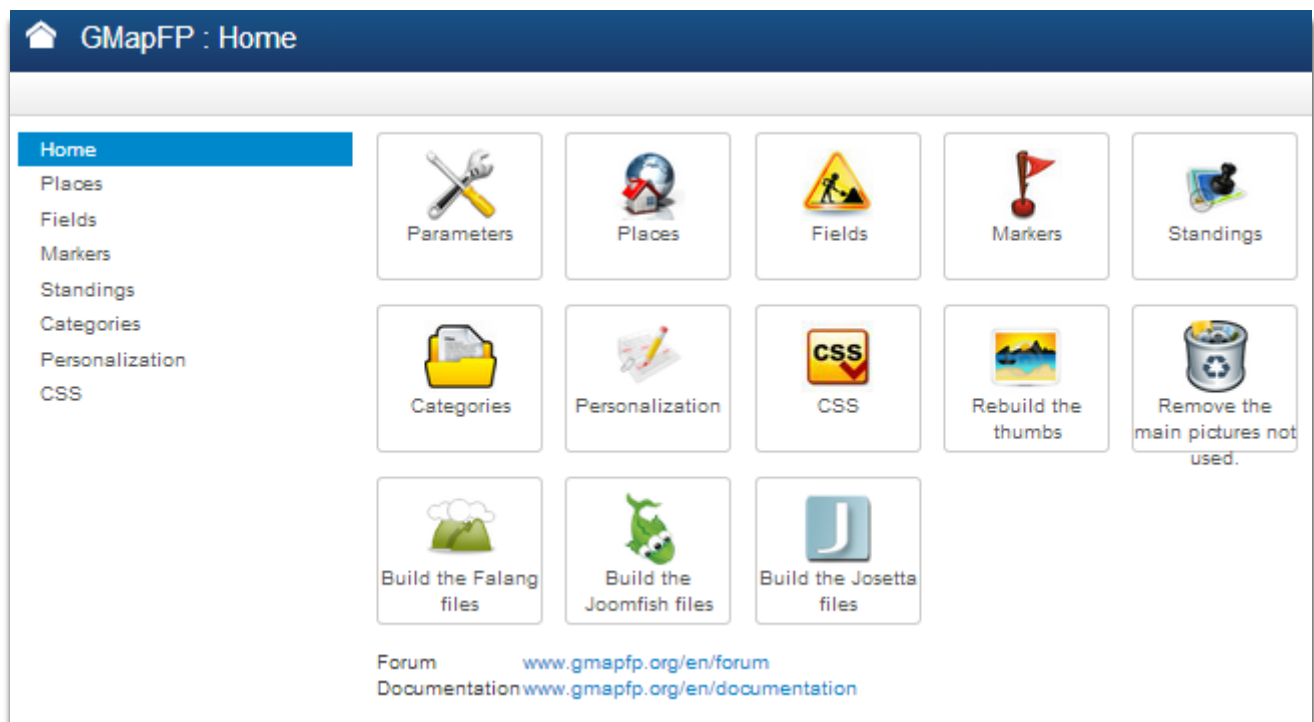

<a href="/administrator/language/fr-FR/fr-FR.com_gmapfp.ini">/administrator/language/fr-FR/fr-FR.com_gmapfp.ini</a>	containing the back end's translation
<a href="/administrator/language/fr-FR/fr-FR.com_gmapfp.sys.ini">/administrator/language/fr-FR/fr-FR.com_gmapfp.sys.ini</a>	containing the back end's
component menu	<a href="/language/fr-FR/fr-FR.com_gmapfp.ini">/language/fr-FR/fr-FR.com_gmapfp.ini</a>
containing the front-end's translation	

# Use of the component

## 5. Home page

You have a new component available in your main components list in Joomla.

In the twinkling of an eye, you can control all the features of GMapFP, as well as the useful links, like the forum of the official website where you will certainly find the answers to your questions !

An icon Falang, Joomfish and Josetta are not visible only if the component is installed and following the parameter "Activate the compatibility Joomla 2.5" into the global parameters of GmapFP.

## 6. GMapFP manager Options

All the following parameters in the screenshot have a tooltip to inform you. Those are your basic parameters which will be selected or not, **by default in all your maps**. Nevertheless, each map can be customized, in another word; all these parameters will also be available on each map that you will constitute via a menu or via the plug-in (see the correspondents sections)

First stage is to settle few **functionalities**, in clicking on **Parameters** the window opens. At the top on the right, there is 'SAVE' button. It is important as, when you go in the parameters window, it can disappears, so you could be tempted to go out of this window directly without backing up.

These parameters are gathered here according to their function as tab

## ⏮ Paramètres Carte

Zone of parameter setting of the maps

Height of the map (px)

Width of the map

Automatic centering

Select your map center

Zoom level of the main map

Zoom of map lightbox 'Map'

Zoom of map lightbox 'Print'

Auto max zoom

Automatic centering for other maps

### Dimensions :

Dimension in pixel (px) of the map posted in [Frontend](#).

The width can be either in pixel or in % (useful to do the adjustments in 100%).

### Map :

[The map's center](#) let here to pre positioned the map during the creation of the places in backend and in frontend, but let also to position the display of the map in frontend. If the automatic's centering style is not activated. You also select the presentation of the map for the administrative part in this place.

### Zooms :

All the map's zoom are pre adjustable.

Do not put the "zoom at best" on NO for using the display zoom.

Zone of parameter setting of the maps options display

View map

View satellite

View hybrid

Display 'Tilt45'

Viewn terrain

Display map default

### Different kind of maps :

You can choose to do not allow an access to all of the possible view in frontend.

### Zone of parameters setting of the map controls

Bar zoom level and navigation	<input type="button" value="Hide"/> <input checked="" type="button" value="Show"/>
Scale indication	<input type="button" value="Hide"/> <input checked="" type="button" value="Show"/>
Mouse wheel	<input type="button" value="Hide"/> <input checked="" type="button" value="Show"/>
Zoom by double click	<input type="button" value="No"/> <input checked="" type="button" value="Yes"/>
Display the logo	<input type="button" value="Hide"/> <input checked="" type="button" value="Show"/>
Over view map control	<input type="button" value="Hide"/> <input checked="" type="button" value="Show"/>
Display button for information of Panoramino, Traffic, ...	<input type="button" value="Hide"/> <input checked="" type="button" value="Show"/>
Show traffic	<input type="button" value="No"/> <input checked="" type="button" value="Yes"/>
Display the transit	<input type="button" value="No"/> <input checked="" type="button" value="Yes"/>
Show Panoramino	<input type="button" value="No"/> <input checked="" type="button" value="Yes"/>
View the weather !	<input type="button" value="No"/> <input checked="" type="button" value="Yes"/>
└ Unit of temperature	<input checked="" type="button" value="Celsius"/> <input type="button" value="Fahrenheit"/>
└ Clouds	<input type="button" value="No"/> <input checked="" type="button" value="Yes"/>
Full screen button	<input type="button" value="No"/> <input checked="" type="button" value="Yes"/>
└ Z-index / Full screen	<input type="text" value="div_style.zIndex= 2000;"/>
└ Z-index / Normal screen	<input type="text" value="div_style.zIndex= 1;"/>
Enable geolocation	<input type="button" value="No"/> <input checked="" type="button" value="Yes"/>
└ by click on a button	<input type="button" value="No"/> <input checked="" type="button" value="Yes"/>

The elements of the maps :  
They are described in the  
section 14: [Frontends'](#)  
[elements](#).

Information display :  
Panoramino, traffic, Forecast.  
Those functionalities evolve in  
Google Maps, so they depend  
of the evolving of this one.

The style property css z-  
index allow to specify the  
stacking position from one  
block to another.

### MarkerClusterer

Activate	<input type="button" value="No"/> <input checked="" type="button" value="Yes"/>
Cluster style	<input type="text" value="People"/>
Max Zoom	<input type="text" value="14"/>
Grid size	<input type="text" value="Default"/>

Markers clusterer :  
4 types are available

Standard

People

Conversation

Heart

The small icon is generated on the areas which got less than 10 places, the big one on the one whose got more than 10.

## Parameters Display

The Pro versions give you the possibility to customize these displays by the creation of Templates. At least, 7 Templates are available: Default, Description, Detail, Directory, Diving, Duck... It also exist paid templates, and you can, if the developing part do not afraid you, to create your own ones... Or you can request for an estimate.

Map Parameters	Affichage	Filters	E-Mail	Picture	Other / GeoXml
Name of general template	directory				
Name of article template	default

Labels	<input type="button" value="Hide"/> <input checked="" type="button" value="Show"/>
Pictos	<input type="button" value="Hide"/> <input checked="" type="button" value="Show"/>

This pane will manage the fields of your form, their position is defined, it will be up to you to manage the organization with the display of the fields or not, and rewriting the labels of some of them.

## ◀ GPX (charged option) Parameters

Paramètres Carte	Affichage	Filtres	E-Mail	Images	Autres / GéoXml	Gestion des champs du backend	<b>GPX</b>	Droits
<b>Paramètres du bouton d'exportation des données au format GPX</b>								
Activer			<input type="radio"/> Non <input checked="" type="radio"/> Oui					
Réécriture d'URL en clair (SEF)			<input type="radio"/> Non <input checked="" type="radio"/> Oui					
Nombre maximal de lieux exportés par fichier			<input type="text"/>					

GPX is a file format for exchanging GPS coordinates.

This format is used to describe a collection of points used in the form of "waypoint", "track" or "road". This format is open.

## Permissions Parameters

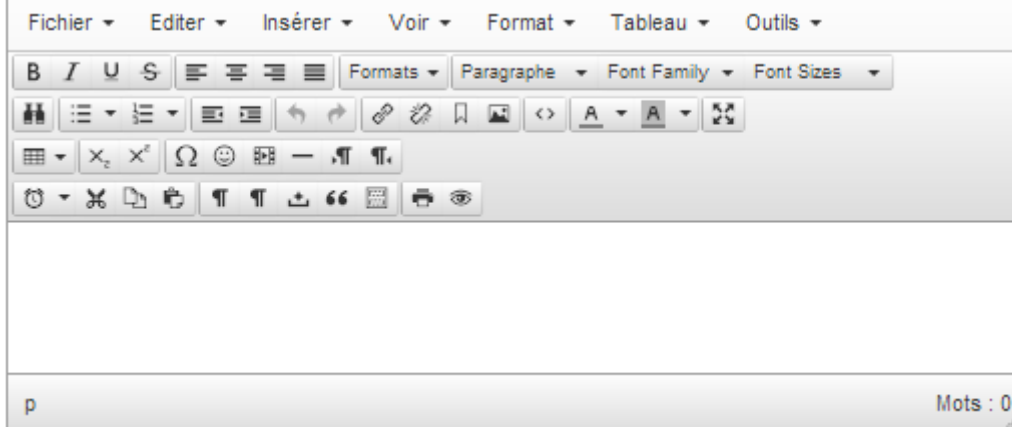

This tab takes over the management right access for GMapFP component for Joomla. We refer to the [Joomla's documentation](#) for use.

Default permissions used for all content in this component.

Manage the permission settings for the user groups below. See notes at the bottom.

Public	Action	Select New Setting <sup>1</sup>	Calculated Setting <sup>2</sup>
– Invité	Configure	Inherited	Allowed (Super User)
– Gestionnaire	Access Administration Interface	Inherited	Allowed (Super User)
– – Administrateur	Create	Allowed	Allowed (Super User)
– Enregistré	Delete	Allowed	Allowed (Super User)
– – Auteur	Edit	Allowed	Allowed (Super User)
– – – Rédacteur	Edit State	Allowed	Allowed (Super User)
– – – – Éditeur	Edit Own	Denied	Allowed (Super User)
– Super Utilisateur			

## But also ...

The image shows a screenshot of the Joomla! editor toolbar. It includes various icons for text formatting (bold, italic, underline, strikethrough, text color, background color), list creation (bulleted, numbered), linking (link, unlink), image insertion, and other editing tools. The toolbar is organized into rows and columns, with some sections like 'Paragraph' and 'Font Family' having dropdown menus. The bottom of the editor shows a text input area with the letter 'p' and a word count indicator 'Mots : 0'.

You can use the syntax of your plug-ins in all areas of publishing of GMapFP

## 7. Categories and subcategories creation

Step 2, It's not to create place; it's to create categories first, which will organize your places. In fact, to create a place you have to give a name and assign a category, you can create subcategories as many as you need. This is not an insignificant thing, it will of course influence the presentation of your maps and more if there are many categories. So think twice for the presentation that you would like to do...

The screenshot shows the 'Category' tab of the GMapFP interface. At the top, there is a 'Title' field and an 'Alias' dropdown set to 'Auto-generate from title'. Below this are tabs for 'Category', 'Publishing', 'Permissions', 'Options', and 'Default marker'. The 'Description' section features a rich text editor with a menu bar (Fichier, Editer, Insérer, Voir, Format, Tableau, Outils) and various formatting tools. To the right of the editor are dropdowns for 'Parent' (set to '- No parent'), 'Tags' (with a 'Select some options' button), 'Status' (set to 'Published'), 'Access' (set to 'Accès Public'), 'Language' (set to 'All'), and a 'Note' field. At the bottom left, there are buttons for 'Article' and 'Image'. At the bottom right, there is a 'Toggle editor' button. The text area contains a single 'p' tag and a 'Mots : 0' counter.

This screenshot shows the 'Default marker' tab. It features a 'Marker' dropdown menu. The menu is open, showing a search bar and a list of categories with their corresponding icons: 'Aéroport' (yellow airplane), 'Equitation' (green horse), 'Ferry' (yellow ferry), 'Forêt' (yellow trees), and 'marqueur' (red location pin). The 'Aéroport' category is currently selected.

In the options of your category, you can choose the default marker that will be gave to it. Any place can then with its own marker.

## 8. Places manager in backend

The backend allows you to see all of these places. Filters can restrict the display by city, department and / or category. You can manage the publication, display order and send an email to the creator of

the place.

The taskbar gives you the following options for managing. At this level you have the option of

- [New](#) location
- [Edit](#) location
- [Copy](#) to the same the place, which will appear in this unpublished form
- [Author](#), you can assign the author to another user. May be useful for the management frontend.
- [Publish](#) / [Unpublish](#) the selected locations.
- [Delete](#) / [Edit](#)
- [Options](#) Settings component.

For the management of the places in frontend, see the section 21.

## 9. Place creation

Here, you are able to create places, relatively intuitive section. A name, an alias (which is automatically added if you don't fill it: Alias have to be without special characters and no space) and one category and your place is created.

Then six tabs are available:

- [Location](#)
- [Icons](#) to assign labels to your site
- [Details](#) handle all display content maps and bubble GMapFP
- [Photo gallery](#) allows you to insert images
- [Linking](#) an article can allow you to make a link to a specific article
- [Hide](#) allows you to enter fields that are not visible to the user: Notes, tag to search by keyword ...

The marker will indicate the position of your location on the map (see the [Marker](#) section for adding new). The marker symbolized by a question mark rainbow sky is the default marker of the category.

## Icons

This section allows you to link to your site labels. See [ranking](#) for the details.

## Picture's gallery

Inserting image will be possible only after the first record of your location that creates the gallery.

Allow to give a [title](#) and [description](#) for your photo.

GMapFP's nice it took back here your preferred default editor, and the description can be almost an article (be careful anyway to overload!).

## ↩ Link an article

If you select an item or enter an URL without selecting an icon, the item will be visible directly on the marker's click.

Location Icons Details Pictures gallery Link the place with a article or a URL

Enter a link for the function  
'Click on the marker for more informations' (when MouseOver is select)(this link must start with www. or http:// or index.php):

Select a icon for put a icon in the article detail (if not, the link is ready when clic on the marker).:

Icon label:

Icons provided in Joomla suffice in most cases; however, you can always add some via FTP. The title of the icon will appear in the tooltip.

## ↩ Parameters and Metadatas

Parameters - Article

## 11. Standings

The Icons of classification is used to assign a series of pictograms to your site. In GMapFP these pictograms are related to the use of the first component for the tourist places' management. But of course you can create new ones that will allow you to also customize your component.

## 12. Maps menus

To display a map on your website you have two options, via a menu and via the plug-in (for the latter see section 23).

To create a menu, simply go to the [menus management](#) of your Joomla and choose GMapFP, several types of menus are available.

The first two allow the creation and management of places Frontend. All Joomla menus have the same basic parameters. Again we will refer to the [documentation for Joomla](#).

The GMapFP parameters which let the customization of your menus are in the tabs down the right. They are rated GMapFP in head. Others are Joomla's parameters assigned to all Joomla's menus.

**GMapFP Article : Highlighting of a place**

- \* **Form to manage places by the users** A form allowing the management of the places related to a user (obligatory identification)
- \* **Form to submit a place** Allows a user recorded to submit places to the administrator (only the administrator can publish the places)
- Display a contact form** Display a contact form with map and detail of a place
- Display by simple list (all or categories)** Display the map, articles or map and articles of all places
- Display fully (all or categories)** Display the map, articles or map and articles of all places
- Display only one place article** Display only one place description (the map display is possible by icon)
- Display the categories tree** ADisplay the categories tree with a map (at right, at left, at top or at bottom).

### ☞ menu **Submission form of one place**

Offers a menu to access to a [Frontend form](#), which allow the [registered users](#) (or not see settings in the administration of rights) to offer a place.

#### - *Global Parameters*

Insert an [introduction](#) and set the [redirect](#) page after submission.

#### - *Options*

Terms [publication](#), [moderator](#) (s) and [email notification](#).

#### - *Map Parameters*

Managing the [display](#) of the map (centering, zoom, url [GeoXml](#))

- *Fields displayed*

[Show](#) or [hide](#) fields.

- *Required parameters*

Make entering a [required field](#), the icon  will appear next to the fields.

⚡ menu **Management of the places in frontend**

Allows users to manage all places or only those they have submitted. Adjust the access depending on the level of user access levels (see [Elements Frontend](#) for use).

- *Options categories*

Restrict access of the categories, limit the number of submission.

- *Options*

Defining [Moderation](#) actions

- *Fields displayed*

[Show](#) or [hide](#) items and fields

⚡ menu **Display of the place's description**

Displays the description of a place with its image and coordinates, plus the shutters opening up the plan, the window schedule and rates, contact form, etc.. See section 19 for an example of content display.

- *Required parameters*

Selecting the location to display 

- *Map Parameters*

Managing the [display](#) of the map (centering, zoom, url [GeoXml](#))

⚡ menu **Display fully (all or categories)**

Can display a map with all the places of one or more categories.

- *Global Parameters*

Selection of [customization](#), the [type of display](#)

- *Options categories*

Select [category](#) and [subcategories](#).

- *Options*

[Order](#) management, [paging](#) and can include elements of [SQL queries](#).

- *Map Parameters*

Managing the [display](#) of the map (centering, zoom, url [GeoXml](#))

⚡ menu **Contact form**

Can display a contact form to quickly reach the place in question, only if his email is entered during the creation of a place.

- *Paramètres*

[Place](#) selection, [Captcha](#), [email](#) copy.

⚡ menu **Simple list**

Can display a map with all the places in the list.

- *Global Parameters*

Selection of [customization](#), management [column](#) display of listing, number of columns, [list position](#)

- *Options categories*

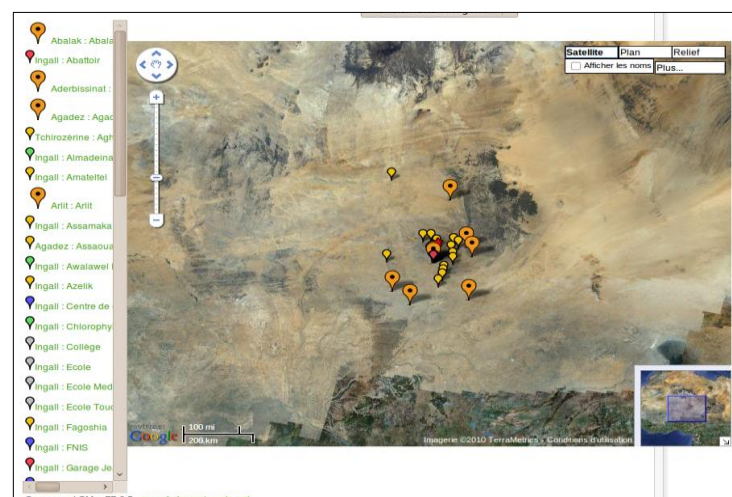

Select [category](#) and [subcategories](#).

- *Options*

[Order](#) management, [paging](#) and can include elements of [SQL queries](#).

- *Map Parameters*

Managing the [display](#) of the map (centering, zoom, url [GeoXml](#))

### 13. Legend customization

Customization offers the opportunity to post a comment, caption below or above the map display or the description of a place. This is very useful to avoid going systematically through articles. These customizations are called when we create a menu in the [global settings](#) (section 10).

4 publishers offered you following the location that you want in you page.

You will have to give an explicit name, to find the customization easy.

Your default editor is included in this box.

The personalization is placed according to your choice above or below the map or the list of places or both.

You also have the option of having a Joomla's plug-ins management in the texts of the customization.

For example, you can load in your personalization a position module User9 with command. { User9 loadposition }

### 14. Marker creation

In markers management, you have at your disposal about twenty markers.

To add markers, you just need to go on [/New](#)

Like any markers, it will have a name and a URL.. The URL will be at your convenience. If you choose to put your markers in the repertory of your website, you'll have to download them via a FTP.

Be careful to write as following : [../images/gmapfp/marqueurs/mypicture.png](#) ... if you click on [save](#), you can control if your image is found.

The Pro versions offer you the possibility to position your marker with precision on your map and to add a shadow. The size of the marker cannot be managed here, it is only indicative.

When you are going on the creation of your places, the new marker is available, and also in all the component in backend and in frontend.

## **15. CSS modification**

This option is only for advanced users. If you don't know the syntax of CSS files, you may destroyed the presentation of GmapFP elements.

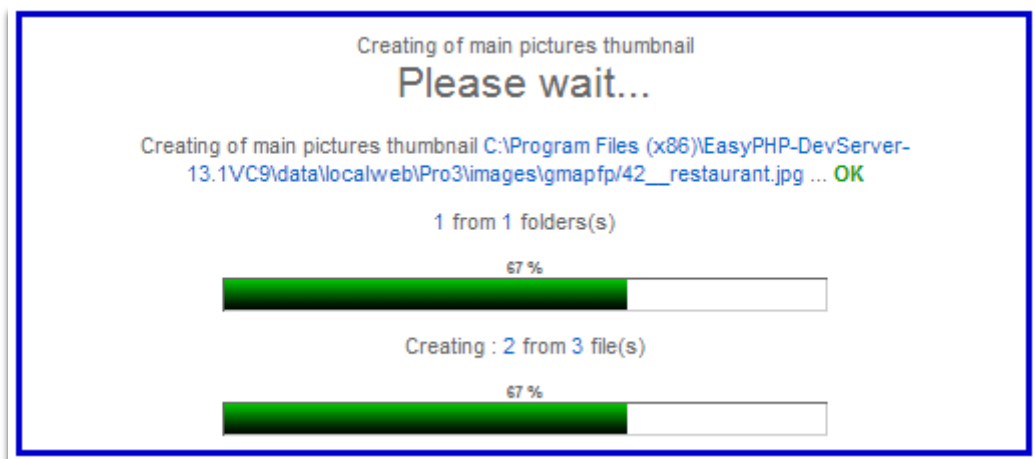

Anyway, it will be better to refer to specialized documentation for the CSS syntax.

## **16. Thumbnails and image**

- [Regenerate thumbnails](#) is particularly useful when we pass from the free version to the Pro version or when the size of the thumbnails is changed.

- [Remove](#) unused items can make a small welcome cleaning when there s a lot of places referenced.

# Elements in Frontend of the component

## 18. The Templates

There are two types of template GMapFP:

General templates that affect the presentation of the places in the list view.

Templates items that affect the presentation of a place in the Lighbox or in the one view place.

**Ingall** (Ville) 

Ville : Ingall Département : Tchirozérine Pays : Ingall

Description :

La petite ville de Ingall n'est pas un paradis oublié, c'est une de ces contrées éloignée de presque tout, qui pourtant souhaite comme nous tous vivre et s'épanouir. A travers ce site nous souhaitons participer à son émancipation, mais aussi à la sauvegarde de son identité qui a traversé les 6 derniers siècles.

Ingall (ou In-Gall) est l'une des palmeries la plus septentrionale des plaines Sahéliennes au Niger, qui coure le long d'un Ouéd.

Le nom de Ingall viendrait de "in guiné" qui signifie "le voisin". Plusieurs origines sont possibles selon les traditions orales.

1. La terre qui reçoit les palmiers datiers qui fonde la ville d'Ingall, le vois !

2. La plaine était réputée pour ses lapins et lors d'une chasse, les gens s'écriaient, "in guiné, in guiné".

Template **Standart**

**Ingall** (Ville) 

Ville : Ingall  
Département : Tchirozérine  
Pays : Ingall

Description :

A travers ce site nous souhaitons participer à son émancipation, mais aussi à la sauvegarde de son identité qui a traversé les 6 derniers siècles.

Ingall (ou In-Gall) est l'une des palmeries la plus septentrionale des plaines Sahéliennes au Niger, qui coure le long d'un Ouéd.

Le nom de Ingall viendrait de "in guiné" qui signifie "le voisin". Plusieurs origines sont possibles selon les traditions orales.

1. La terre qui reçoit les palmiers datiers qui fonde la ville d'Ingall, le vois !

2. La plaine était réputée pour ses lapins et lors d'une chasse, les gens s'écriaient, "in guiné, in guiné".

Template **Duck**

## 19. The lightbox and display the places

The lightbox is the window that appears (by default) when you click on a marker of your map. It is highlighted in relation to the active page of the website.

Menu title

Place title

Address

Map and photo gallery, article or e-mail contact are seeing as a tab.

An elevator let you going down into the lightbox.

The route is hidden below.

Layout tabs are displayed only if there is evidence for these tabs.

Map

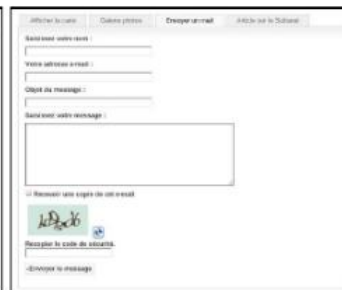

Photo Gallery (2 display possibles)

Contact form

Article

## 20. The contact form

It shows the creation of a menu or icon of the lightbox if there is an email address in the input location coordinates.

of the lightbox if there is an email address in the input location

Restaurant ★★★★★ (Categorie exemple GMapFP 1)

Belle salle pouvant accepter une trentaine de couverts, ...

Saisissez votre nom :

Votre adresse e-mail :

Objet du message :

Saisissez votre message :

Adresse :  
sa rue  
sa ville  
Var France  
Custom2 : 15

Custom3 :  
Custom4 : information pou  
l'utilisateur

The entire description is included, and is added below the input area of your message with identification.

Below is situated the situation map of the place as well as other shutters.

If the place does not have an email address, the message will warn you.

## 21. The filter

Allow you to filter some elements display on map. Parameters let you to choose the filter field. This list will be not display if all names are absolutely the same or no one was fill-in.

You can also add [adding fields](#) in précising in the creation of your fields.

Filter:

Appliquer

Réinitialiser

-- Choisir une ville --

-- Choisir un departement --

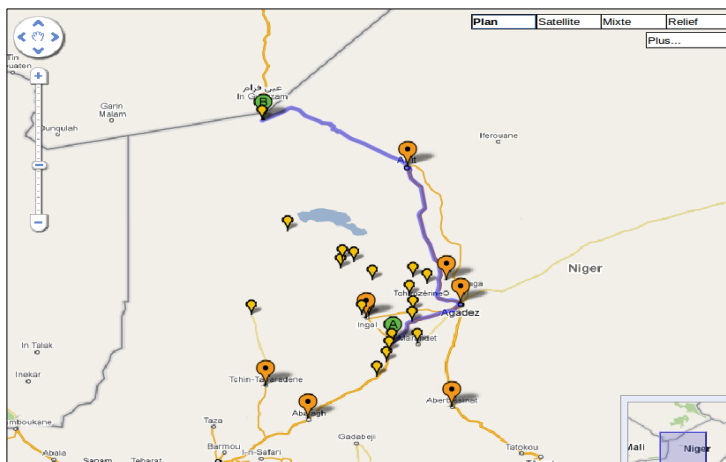

-- Choisir un pays --

-- Choisir une categorie --

Filter allow you to search a word or part of word, on all data into GmapFP.

The reset button combo delivers the default.

## 22. Itinerary

GMapFP propose also to you the itinerary realization between your places.

You can [modify your itinerary in moving the drawing](#).

If there is no road going to your place, a message will be display to inform you that "no road has been find"

Tracez votre itinéraire

De :  ou

Vers :  ou

Tracer

A

N25

Données cartographiques ©2010 Europa Technologies

Composant GMapFP 6.7 - [gmapfp.francejoomla.net](http://gmapfp.francejoomla.net)

In drop-down list, you'll find places you already created, you just have to trace and you'll get your itinerary display on your map and as text as well.

You have choice to write any city or place next to drop-down list or mix both.

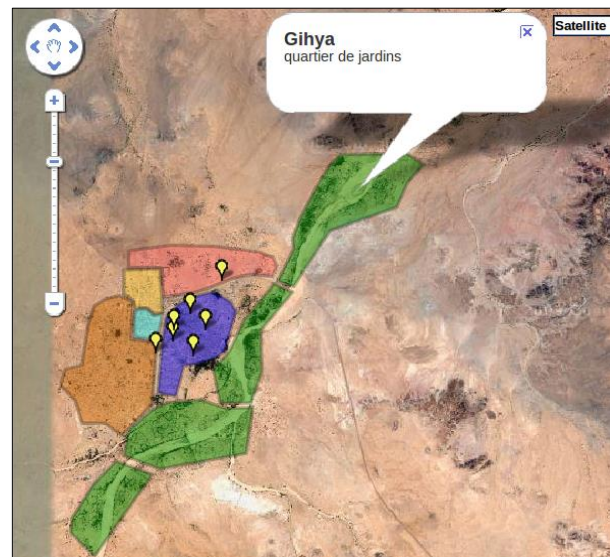

Parameters allow you to manage the automatic mode, toll, bike ...

## 23. GeoXml

GeoXml option give you possibility to display on your map, some polygons, pictures or other maps object. To get that, you'll need a *.kml* file. Here, I will propose you in "[GmapFP for less zero](#)" an easy method to build your map faster, and also to incorporate an image.

It is possible to integrate several .klm files separately by one;

Name and description of your area will be display in lightbox, you have to fill-out this information directly in Google Maps.

## 24. The place submit form

Obviously, back-end form will be re-use, with a little difference following choice you'll done in [Advanced Parameters](#) of your menu; because you can customized differently the frontend from the backend (see section 10).

On bottom, a button

will give to user to suggest a place.

Denotes required fields.

Naturally if some required fields are not fill-out, they'll turn red !

## 25. The manage form of places in Frontend

Each user will allow to update description of their place, published or unpublished it, etc.

One click on place or edit button will open a pre-filled form to edit.

## 26. Printing

Icon  on the form allow you to print a place and its description. The printing settings of your page can be modified by CSS. Click on print appears in the bottom left of the window that opens.

19/05/12	Date
<h1>Ingall</h1>	Title of the place
(Ville)	Category
	
Ville : Ingall Département : Tchirozérine Pays : Ingall	City Department Country
<p>La petite ville de Ingall n'est pas un paradis oublié, c'est une de ces contrées éloignée de presque tout, qui pourtant souhaite comme nous tous vivre et s'épanouir. A travers ce site nous souhaitons participer à son émancipation, mais aussi à la sauvegarde de son identité qui a traversé les 6 derniers siècles.</p> <p>Ingall (ou In-Gall) est l'une des palmeraies la plus septentrionale des plaines Sahéliennes au Niger, qui coure le long d'un Oued.</p> <p>Le nom de Ingall viendrait de "in guéné" qui signifie "le voici". Plusieurs origines sont possibles selon les traditions orales.</p> <ol style="list-style-type: none"><li>1. La terre qui reçoit les palmiers dattiers qui fonda la ville d'Ingall, la voici !</li><li>2. La plaine était réputée pour ses lapins et lors d'une chasse, les gens s'écriaient, "in guéné, in guéné".</li></ol>	Take back of the description
 Ville  Village  Campement <a href="#">Cartothèque</a> <a href="#">Proposez une nouvelle référence</a>	Personalization
	Map
1/2	Pagination

If the option itinerary is activated, it will be display on your printed pages.

# Using of plug-ins and modules

A plug-in is predestine to fill up an host component to give to it new functionalities.

## 27. GMapFP Plug-in

The GmapFP plugin allows the insertion of a map in yours articles. You just have to respect the writing syntax directly to the place you want in your article. The syntax is written between hook and take the following format :

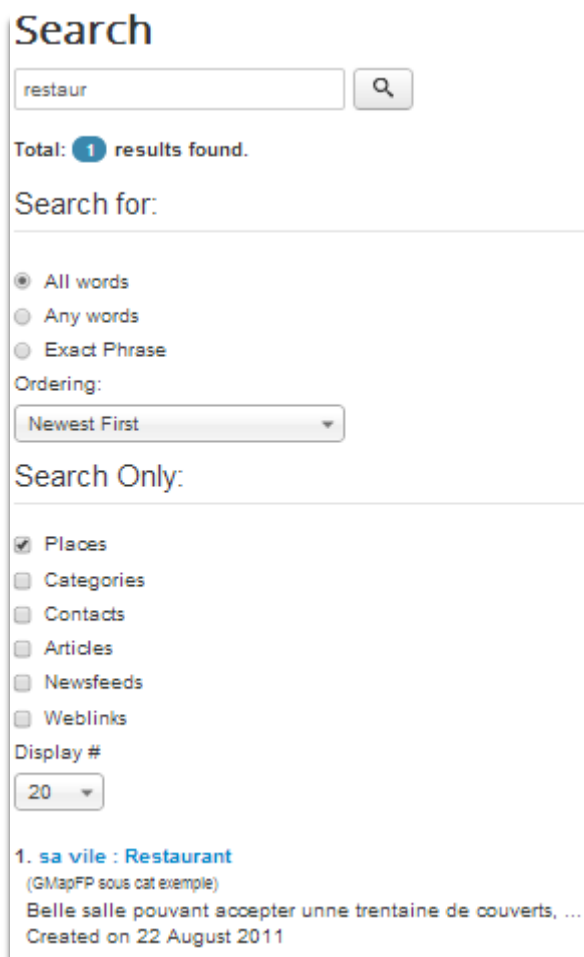

```
{gmapfp paramètre="xx" paramètre="xx"}
```

You can put as many parameters as you like. Each parameter is separated by space. The parameter values are entered in quotation marks.

Listed below all used parameters:

Parameters	Syntax of parameter	Value
Places	id="xx"	N° of id of place
Category and subcategories	catid="xx"	N° of id of the category or subcategories
Width of the map	lmap="xxx"	Value in pixel
Heigth of the map	hmap="xxx"	Value in pixel
Zoom of the map	zmap="xx"	the value of zoom : 1 to 18
Itinerary	itin="1" ou itin="2"	Presence absence of the option
Display map type of the map	bar_psm="1" ou bar_psm="2"	Presence absence of the option
Display bar navigation of the map	bar_z_nav="1" ou bar_z_nav="2"	Presence absence of the option
Display scale of the map	ech="1" ou ech="2"	Presence absence of the option
Display type of select marker	click_over="1" ou click_over="2"	Presence absence of the option
Display menu «more information»	more="1" ou more="2"	Presence absence of the option
Display mode selection "hybrid"	map_hyb="1" ou map_hyb="2"	Presence absence of the option
Display mode selection "physic"	map_phy="1" ou map_phy="2"	Presence absence of the option
Display mode selection "normal"	map_nor="1" ou map_nor="2"	Presence absence of the option
Display mode selection "satellite"	map_sat="1" ou map_sat="2"	Presence absence of the option
Choice for display map by default	map_choix="x"	1=>Map, 2=>Satellite, 3=>Hybrid, 4=Physic
Display a file GeoXml	kml_file="URL"	See the GeoXml section
Display the control zone	zzoom="1" ou zzoom="2"	Presence absence of the option
Activate the zoom by mouse wheel	mzoom="1" ou mzoom="2"	Presence absence of the option
Indicating the position of manually centering the map (longitude and latitude)	map_centre_lng="xx,xxxxxxx" map_centre_lat="xx,xxxxxxx"	Longitude and latitude, both must be seized to function.
This feature allows you to center a map with the information contained in the selected ID, Latitude, Longitude and Zoom.	map_centre_id="id"	If "mzoom" is used, it prevails in the zoom function "map_centre_id".
Added information to filtering SQL	where="xxxxxxxxxx"	Be careful to the syntax !
How to display the detail window	plus_detail="1" ou plus_detail="2"	1 => by click on the marker, 2 => by click on link « More information »

## 28. Search Plug-in

It allows you to search data entered in GMapFP via the search module of Joomla.

Search as a plug-in is a plug-in that is installed in the directory / plug-ins/search. It is specific to a component. If this plug-in does not exist, the search module Joomla cannot find any result on the words contained in the component.

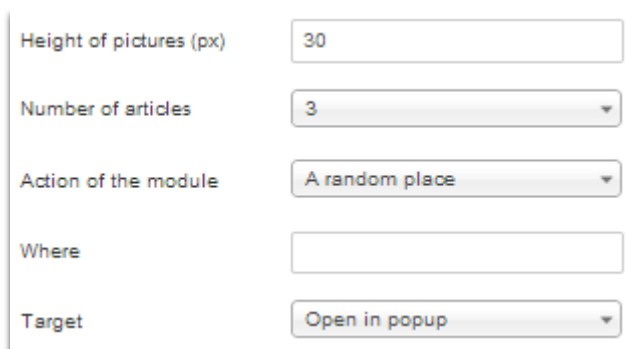

The plug-in search GMapFP adds "Places" in the search box.

The search module of Joomla will give all results that it finds in your site with the selected search. For having only the results from GMapFP input (location, description, etc..), You must tick the "Location" box.

But also activate the research by keyword on your personal fields.

## 29. GMapFP Module

During the installation a module is automatically created, it must be activated by going into management modules. When you click on it you have access to conventional parameters to display your new module on all pages of your website or just a part.

on the left.

It let display either

- a random location,
- or the last input place,
- or as the Where field

In the advanced settings you manage the cache.

Frontend module is presented in this form, Image on the right and place name

### 30. GmapFP Map Module

This second module is used to display a mini map. The display of this map is configured.

Module	Description	Menu Assignment	Module Permissions	Parameters of the map	Advanced
Height	<input type="text" value="200px"/>			Map control	<input type="button" value="Hide"/> <input type="button" value="Show"/>
Width	<input type="text" value="100%"/>			Scale	<input type="button" value="Hide"/> <input type="button" value="Show"/>
Zoom	<input type="text" value="10"/>			Logo	<input type="button" value="Hide"/> <input type="button" value="Show"/>
Map	<input type="text" value="Hybrid"/>			Target	<input type="text" value="Lightbox"/>
Traffic	<input type="button" value="Hide"/> <input type="button" value="Show"/>			KML file	<input type="text"/>
Map menu	<input type="button" value="Hide"/> <input type="button" value="Show"/>				

### 31. Plug-in JCE pour GMapFP

This is an extension of JCE plugin "Advanced Links" (advlink) to insert a link to an article. It install through the management of plug-ins of JCE component.

You just have to find the place!

### 32. Tip : Inserting comments area Facebook

If you want to insert a comment box FaceBook by location:

Download the plugin "FaceBook Comments Plugin" on <http://pro.gmapfp.org/en/the-add-ons/category/2-add-ons-for-joomla-3> and install it.

Go GMapFP and create a field

- Title: FB Comments
- Post: yes
- Type: text information
- Location: In tabs
- Parameter: {fcomment}

# As conclusion

This manual does not answer all the questions you ask.

It's your turn to take control and make your GMapFP experience. We only hope that this manual will have guided you through your first steps, and do not hesitate to share your experiences, your comments and suggestions in the forum site <http://www.gmapfp.org>, the section consecrated!
